Graphics Design AutoCAD Computer Aided
Design (CAD) is a family of computer aided
design programs used to design and draft 2D and
3D drawings. Some CAD programs such as
AutoCAD Architect and AutoCAD Landscape
Architect use 2D, 2.5D, or 3D programs to create
the drawings. Other CAD programs such as
AutoCAD Electrical and AutoCAD Fire and Gas,
use 2D programs to create the drawings and then

use their own dedicated 2D or 3D CAD programs to add features such as BOMs, schedules, bills of materials, and job cost information, and to create the finished drawings. Other CAD programs such as AutoCAD Web and AutoCAD Studio, also have their own 2D or 3D CAD programs. All these CAD programs have traditionally been available only on large, expensive commercial CAD workstations using an internal frame buffer. Since the publication of the Unified Modeling

AutoCAD also includes a native dxf feature that allows creating DXF files from scratch within the application (not from an external source). This native DXF feature can also be used in conjunction with the native XML file format (as it can store several DXF files in a single XML document). File format The native file format for AutoCAD is the DXF file format. It is also the

default file format for the AutoCAD Architecture and Architectural Engineering program types. It allows 3-dimensional model data and 2-dimensional data to be combined in a single file. It is used for importing, exporting and creating 2-dimensional drawings in the AutoCAD application, which is a requirement to use these 2D-related tools.

XML format The native file format for the AutoCAD XML file format, which is similar to the DXF file format, is a cross-platform format which uses XML-based data structures for storing 2D and 3D information and is used for importing, exporting and creating 2D drawings in the AutoCAD application.

APX format The native file format for the AutoCAD APX format, which is similar to the DXF file format, is a file format that is a direct extension of the DXF file format and that is used for importing, exporting and creating 2D drawings in the AutoCAD application.

AIM format The native file format for the AutoCAD AIM format

is a proprietary file format developed for AutoCAD software. AIM allows large amounts of data to be stored in a smaller amount of space. It can store 2D and 3D information and is used for importing, exporting and creating 2D drawings in the AutoCAD application. It is also used to store drawing objects, commands and tags.

DXX and DIA file format The native file format for the AutoCAD DIA file format is a proprietary file format developed for AutoCAD software. It allows information on components and their usage to be stored in a format that is different from the format of the drawings and views files. It is used for importing, exporting and creating 2D drawings in the AutoCAD application.

HDAX format The native file format for the AutoCAD HDAX format, which is a direct extension of the DXF file format, is a file format that is used for importing, exporting and creating 2D drawings in the Auto a1d647c40b
